
1. Overall Application Structure

I would start with four main pages:

Home (Page ONE)

"The League at a Glance"

A league-wide historical overview from 2014–2025.

Manager (Page TWO)

"Your Fantasy Career"

Select a manager and explore their entire history in the league.

Season (PAGE THREE)

"The Season"

Select a season and explore everything that happened that year.

About the League (PAGE FOUR)

League history, rules, owners, teams, champions, traditions, etc.

I'd also consider a fifth page eventually:

Rivalries (PAGE FIVE)

Manager vs. Manager historical head-to-head records.

That could become one of the most fun pages.

(PAGE ONE) :: Home Page — League Overview

The Home page should answer:

"What has happened in this league over the past 12 seasons?"

I'd make this a highly visual landing page rather than a giant table.

Hero section

Something like:

Fantasy Football League

2014–2025

Then a few major KPIs:

KPI	Example
Seasons	12
Managers	12
Games Played	1,584
Championships	12
Highest Win %	72.4%
Most Wins	132
Most Points	18,492

Most Playoff Appearances 9

Obviously, these would be calculated from your data.

League Performance Over Time

A line chart showing the league's overall scoring environment.

For example:

Average Points Per Team Per Week

2014 → 2025

This immediately gives you a historical perspective.

You could also allow the user to switch between:

- Average Points
- Median Points
- Highest Weekly Score
- Lowest Weekly Score

- Average Margin of Victory

3. League Manager Rankings

I'd put a historical leaderboard on the Home page.

Something like:

Rank	Manager	Wins	Losses	Win %	Championships	Playoffs	Points
1	Manager A	132	58	69.5%	3	9	18,492
2	Manager B	124	66	65.3%	2	8	17,921
3	Manager C	119	71	62.6%	1	7	17,440

But I'd make this **interactive**.

Allow the ranking metric to change:

Rank By:

Wins | Win % | Championships | Points | Playoff Appearances | Avg Finish

That gives you one reusable visualization instead of six different tables.

4. A "League History" Visualization

This could become one of the signature visuals.

Something like:

Who dominated when?

A bump chart showing manager rankings by season.

For example:

You could see managers move from:

1st → 7th → 2nd → 4th → 1st

over their careers.

That is much more interesting than simply looking at a standings table.

(PAGE TWO) :: Manager Page — This Should Be the Star

I think your Manager page could be the most compelling part of the application.

The page should essentially tell the story of someone's fantasy football career.

At the top:

Rafael Guevara

Member Since: 2014

Seasons: 12

Teams: 4

Championships: 2

Then a profile image/avatar.

Under that, your KPI cards:

Career Record

118–72

62.1% Win Rate

vs.

League Avg: 50.0%

And perhaps:

- Championships
- Playoff Appearances
- Average Finish
- Best Finish
- Worst Finish

- Total Points
- Average Points/Week

6. Manager Career Timeline

I'd then create a season-by-season career view.

For example:

Season	Team Name	Record	Win %	Finish	Points	Playoffs
2025	The Wrecking Crew	10–4	71.4%	2nd	1,842	✓
2024	Data Destroyers	8–6	57.1%	5th	1,710	
2023	Data Destroyers	11–3	78.6%	1st	1,921	🏆
...	...	...	...	...	...	...

But again, I'd make this visual.

7. Win Percentage Through the Years

Your idea here is excellent.

I'd have:

Career Win Percentage

A line representing the selected manager.

Then a second line representing the average win % of league

League Average

So the question becomes:

"Has this manager historically performed above or below the league?"

Example:

Win %

80% | ●

I'd also allow:

Season Win %

vs.

Cumulative Career Win %

The second one is particularly interesting because you can see whether someone's career trajectory is improving.

8. Draft Position → Final Finish Sankey

Absolutely keep this.

This is a great use of a Sankey.

For each manager:

Draft Position

↓

Final Standing

For example:

Draft #1 ————— 1st
 | ————— 3rd
 | ————— 5th

Draft #6 ————— 1st
 | ————— 2nd

_____ 8th

You could answer:

"Does drafting early actually help this manager?"

I'd actually add a small statistic next to it:

Average Draft Position: 4.2

Average Finish: 3.8

Draft-to-Finish Gain: +0.4

9. The Momentum Chart

This is potentially one of your **best visualizations**.

Your weekly team data gives you the ability to create something that resembles a soccer match momentum chart.

For each week:

Your Points – Opponent Points

Example:

But I'd make it cumulative.

Cumulative Point Differential

Week 1

Week 2

Week 3

...

This tells a story:

"This manager started 4–0, collapsed in Weeks 8–10, then went on a five-game winning streak."

You could even highlight:

- Wins
- Losses
- Streaks
- Biggest comeback
- Biggest collapse
- Longest winning streak
- Longest losing streak

10. Manager vs. Every Other Manager

I would definitely add this.

A matrix:

A B C D E

Rafael — 8–5 4–7 9–3 6–6

But rather than simply showing W/L, show:

Record + Win %

and allow the user to click an opponent.

That could open:

Rafael vs. Manager B

Career Record: 8–5

Average Margin: +12.4

Largest Win: +51

Largest Loss: -38

Last Meeting: 2025 Week 13

Then show all games between them.

This could eventually become your **Rivalry page**.

(PAGE THREE) :: Season Page

The Season page should essentially become:

"What happened during the 2025 season?"

At the top:

2025 Season

 Champion: Manager X

 Runner Up: Manager Y

 Highest Scoring Team: Manager Z

 Best Record: Manager A

Then:

Final Standings

A familiar fantasy football table.

But below it, you can tell the story of the season.

12. Season Performance Timeline

Show each team's record over the season.

For example:

Wins by Week

or a small-multiple chart:

Manager A W W W L W W L W W W

Manager B L W W W L W W L W L

Manager C W L L W W L L W W W

This makes the season immediately understandable.

13. Weekly Points

Your weekly player/team data opens up a lot of possibilities.

For a selected season:

Weekly Team Scores

A line chart with all managers.

Then allow:

Show:

- All teams
- Top 5
- Selected team
- Selected matchup

You could also show:

League Median

which is extremely useful for fantasy football.

14. "Luck vs. Skill" Analysis

This is something I'd strongly recommend adding because you have the weekly data.

You can calculate:

Actual Record

vs.

Expected Record

For example:

Rafael

Actual:

8–6

But based on weekly points:

Expected Record: 10–4

That tells you:

"You were probably unlucky."

Conversely:

Actual: 11–3

Expected: 8–6

"You may have benefited from favorable scheduling."

This could become one of the most entertaining sections of the site.

15. Weekly Player Analysis

Since you have player-level data, eventually the Manager page could allow the user to drill into:

Manager → Season → Week → Players

For example:

Week 8 — 2025

Rafael — 142.8 points

Player	Position	Points
---------------	-----------------	---------------

Player A	QB	28.4
----------	----	------

Player B	RB	22.1
----------	----	------

Player C	WR	19.7
----------	----	------

Player D	WR	16.2
----------	----	------

And then:

Projected vs Actual

if you have projections.

17. The Really Important Relationship

I'd make the hierarchy:

Manager

↓

Team

↓

Season

↓

Week

↓

Player

That gives you enormous flexibility.

For example:

Rafael

→ 2025

→ Week 7

→ Team

→ Players

And you can go the other direction:

2025

→ Week 7

→ All managers

→ All players

One Feature I Would Add: "League Story"

This could differentiate the application from a standard fantasy dashboard.

For every season, automatically generate a narrative:

2025 Season (PAGE THREE EXAMPLE)

The 2025 season belonged to Rafael's team early, but a late-season collapse opened the door for Marcus, who finished the regular season with the league's best record.

Then supporting statistics:

Best Record: 11–3

Highest Scoring Team: 1,942 pts

Biggest Upset: Manager A over Manager B

Longest Winning Streak: 7 games

Biggest Blowout: +73.4

Closest Game: +0.8

This turns your historical data into an actual **league archive**.

21. The Navigation I'd Ultimately Use

Something like:

FANTASY FOOTBALL LEAGUE

HOME

MANAGERS

└— Rafael

└— Manager B

└— Manager C

└ ...

SEASONS

└— 2025

└— 2024

└— 2023

└ ...

(PAGE FOUR) :: RIVALRIES

(PAGE FIVE) :: ABOUT THE LEAGUE

And I'd make **Manager** and **Season** persistent filters rather than separate disconnected dashboards.

The key idea

I wouldn't think of this as simply a fantasy football **dashboard**.

I'd think of it as a **historical league analytics application**.

Your data gives you three different levels of analysis:

League → Manager → Season → Week → Player

And that hierarchy gives you the ability to move from:

"Who is the best manager in league history?"

all the way down to:

"Why did Rafael lose Week 8 of the 2022 season?"

That's what can make this really compelling.
